Dyckerhoff White Cements for various applications

The brand “Dyckerhoff WEISS” has set benchmarks for high quality in building materials since 1931. Today, Dyckerhoff WEISS – our white Portland cement and “specialty of the house” – is more relevant and modern than ever. In an ideal manner, it combines the constructive characteristics of gray cement with the esthetic possibilities and the scope for design of white cement.

Dyckerhoff WEISS gives ever new impulse for building and designing with concrete, as it offers architects, planners and builders to use a wide range of colors, shapes and structures. Thanks to Dyckerhoff WEISS, white and colored products such as exposed concretes, pre-fabricated concrete elements and artificial stones, high-grade plasters and mortars can have a friendly and strong color appearance.

Dyckerhoff white cements are produced in a special manufacturing process and comply with the cement standard EN 197-1 (in-house and third-party monitoring). They are available in strength classes 42.5 R, 52.5 N and 52.5 R. Only very pure raw materials which have got very low iron are their base. Without additives, all Dyckerhoff WEISS products are low in chromate.

We have always noted with pride that the product name Dyckerhoff WEISS is used as a synonym for white Portland cement. For us, this is a clear indication that Dyckerhoff WEISS, as a traditional product of Dyckerhoff, already has the name and the reputation of a successful brand. We have consistently developed the Dyckerhoff WEISS brand and have created our own types for various applications.

Dyckerhoff WEISS FACE CEM I 42.5 R (dw)

... for brilliant and durable concrete surfaces, e.g. exposed concretes, prefabricated concrete elements, artificial stones, concrete goods, Terrazzo or fair faced bricks

Dyckerhoff WEISS SPEED CEM I 42.5 R (dw)

... for particular special construction chemicals applications, especially for accelerated formulations, e.g. adhesive mortars, leveling compounds, grouts or repair mortars

Dyckerhoff WEISS CONTACT CEM I 42.5 R (dw)

... for customers who produce primarily construction chemical products, e.g. leveling compounds, finish plasters, adhesive mortars or additive-rich formulations

Foto: fiveandfriends GmbH

Dyckerhoff WEISS STRONG STRONG N CEM I 52.5 N STRONG R CEM I 52.5 R

... for mortars and concretes with early strength development, e.g. concrete goods, prefabricated concrete elements, masonry and adhesive mortars or grouts

Foto: X-ARCHITEKTEN

Dyckerhoff WEISS DECOR CEM I 42.5 R (dw)

... for mixed binders on a lime-cement base, e.g. finish plasters, adhesive mortars, tile grouts, repair and masonry mortars or processing of surfaces with special slurries

Dyckerhoff FLOWSTONE white / gray

... high-performance binders for the production of concrete products with highest requirements in relation to quality, technical features as well as aesthetics, even thin and filigree components can be realized

The details provided in this information sheet are general information and we cannot take into consideration chemical and/or physical characteristics from materials which may be mixed with our products, jointly processed with our products or come into contact with our products in any way (e.g. as a result of various site conditions). The information is therefore not appropriate for any specific application. Therefore our products must be inspected and tested for each and every individual, application-related utilization prior to their use. The details contained in this information sheet do not constitute any form of quality guarantee.
